- Automated testing
- Java, Python, C++, JS

# Vladimír Jakabovič

## LANGUAGES

English - C1

Slovak - Native

German - B1

## WORK EXPERIENCE

### Entrepreneur - Quant

January 2024 - Ongoing

Over the last few months I've been working with my mentor/business partner Filip Uhlarik on a very extensive project focused on financial analysis and trading. I've learned a lot throughout the last couple of months. I believe the best way to learn something useful is to work on something real and engaging.

### Full Stack Developer

2023 - 2024

For about a year I was freelancing and making websites on request. I worked with a number of libraries and tools such as React, Flask, Bootstrap, Nodejs, Next.js and many more. Again, it was a huge learning experience, as I self-taught myself almost everything from scratch.

### P. J. Servis, s.r.o.

2022 - 2023

During this year I had been doing odd jobs through this service, I've worked almost everywhere from retail, through management and warehousing, to customer service. This made me a very well-rounded worker, who has seen a lot of systems and can adapt to new work easily.

### Satellite Dish Technician

2021 - 2022

Over the course of a year, I had worked with my father, mostly on archivation, documentation and paperwork. I learned a lot about running an LLC. The work also involved setting up satellite dishes for clients and working with Microsoft Excel.

## PERSONAL NOTE

I am young, passionate and a quick learner. Ever since I found out how much fun computers can be, it has been an integral part of my life. I do competitive programming, volunteer to teach children programming, help to host competitions and seminars. I highly suggest you check out my site to get to know a bit more about me and my journey!
